Sample Report Disclaimer & Disclosure

IMPORTANT: FOR ILLUSTRATIVE AND REPRESENTATIONAL PURPOSES ONLY

This document is a Specimen/Sample Report generated by Bars Wealth (AMFI-registered Mutual Fund Distributor: ARN-334186). It is intended solely to demonstrate the analytical capabilities, report formats, and the range of simulations we provide to our clients.

By accessing or viewing this sample report, you acknowledge and agree to the following:

- **Data Obfuscation & Privacy:** *All financial figures, names, and personal identifiers in this sample have been intentionally blurred, masked, or redacted to protect data privacy. Actual reports feature comprehensive, custom analysis. This specimen provides only generic context to help you navigate the visualized data and simulations.*
- **Non-Reconciled Data:** *As this is a composite sample, data points and figures shown on one page may not reconcile or correlate with figures shown on subsequent pages. These pages may be drawn from different mock scenarios to showcase various analytical tools (e.g., Overlap vs. PCA Analysis) and do not represent a single, cohesive investment portfolio.*
- **Illustrative Nature:** *The charts, graphs, and simulation outcomes (including but not limited to FIRE sims, terminal corpus projections, and market regime stress testing) are based on hypothetical assumptions and mathematical models. They are not a guarantee, projection, or prediction of actual future returns or market behavior. Please note that this document showcases only a selection of our analytical suite; additional proprietary tools and simulation modules are available and may be utilized based on specific client profiles and requirements.*
- **No Investment Advice:** *This report does not constitute "Investment Advice" as defined under SEBI (Investment Advisers) Regulations, 2013. The information provided is for investment facilitation and informational purposes only, intended to assist in informed decision-making regarding mutual fund schemes.*
- **No Performance Guarantee:** *Past performance of any mutual fund scheme or simulation model is not a reliable indicator of future results. Mutual Fund investments are subject to market risks; please read all scheme-related documents carefully before investing.*
- **Nomenclature:** *Bars Wealth acts in the capacity of a Mutual Fund Distributor. Any reference to "Goal Planning" or "Simulations" refers to the process of identifying suitable mutual fund schemes aligned with a client's stated financial goals and risk profile.*

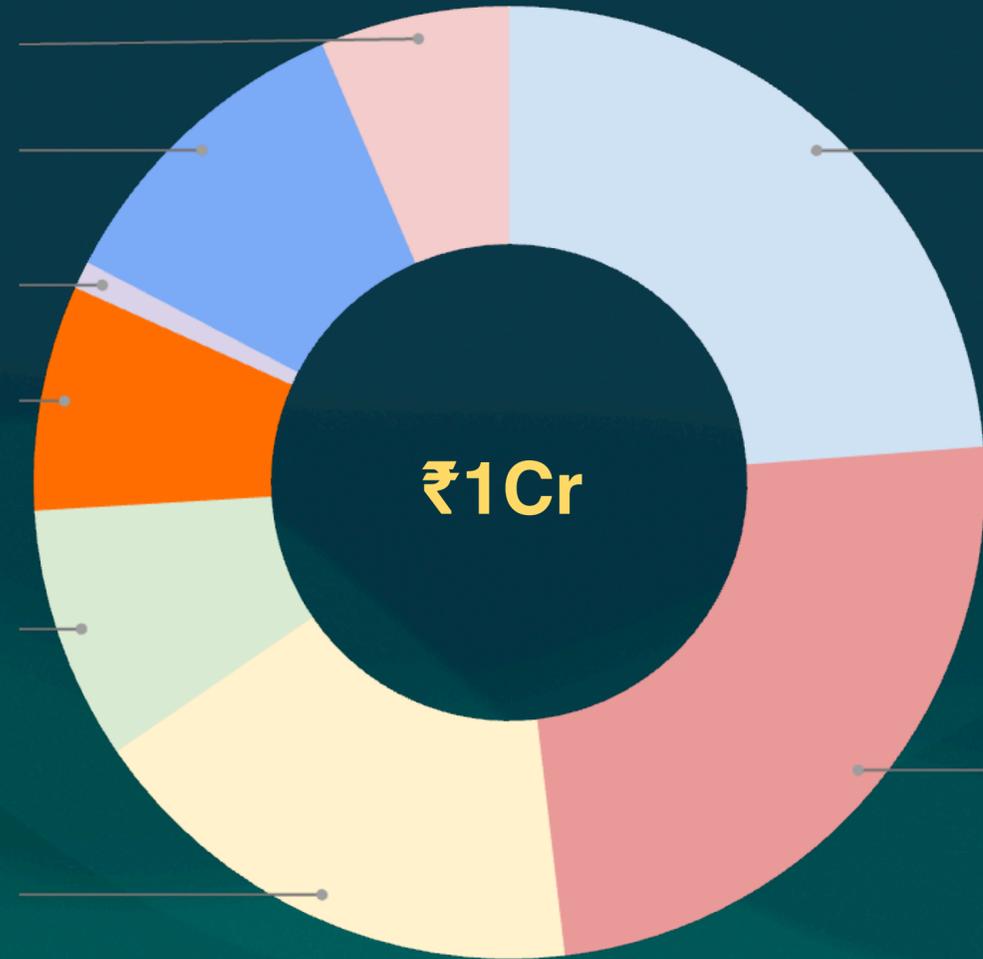

Mutual Fund investments are subject to market risks, read all scheme related documents carefully.

Current Portfolio Performance Breakdown

A comparison chart of the overall portfolio vs. the benchmarks, and charts showing the breakdown of fund returns vs. their respective benchmarks.

Portfolio Correlation & Overlap

The overlap matrix looks at the actual stocks held inside each fund and highlights how much duplication exists across your portfolio. A high overlap means you are essentially owning the same companies through multiple funds, while a low overlap indicates that the funds are giving you exposure to different sets of stocks.

Portfolio Correlation & Overlap

The fund correlation matrix is a tool that shows how closely the performance of different funds is related. When two funds have a high correlation, their returns tend to rise and fall together, while a low correlation indicates that they move more independently, and a negative correlation means they often move in opposite directions. This helps you assess whether your portfolio is genuinely diversified or whether you are simply holding multiple funds that behave in the same way and own similar companies, which reduces the benefits of diversification.

Portfolio PCA Analysis

The PCA Analysis or Principal Component Analysis shows us the actual number of funds that are driving portfolio returns out of all the funds.

True Diversification Score (PCA)

Principal Component Analysis reveals how many *independent* return drivers your portfolio actually has.

Actual Funds

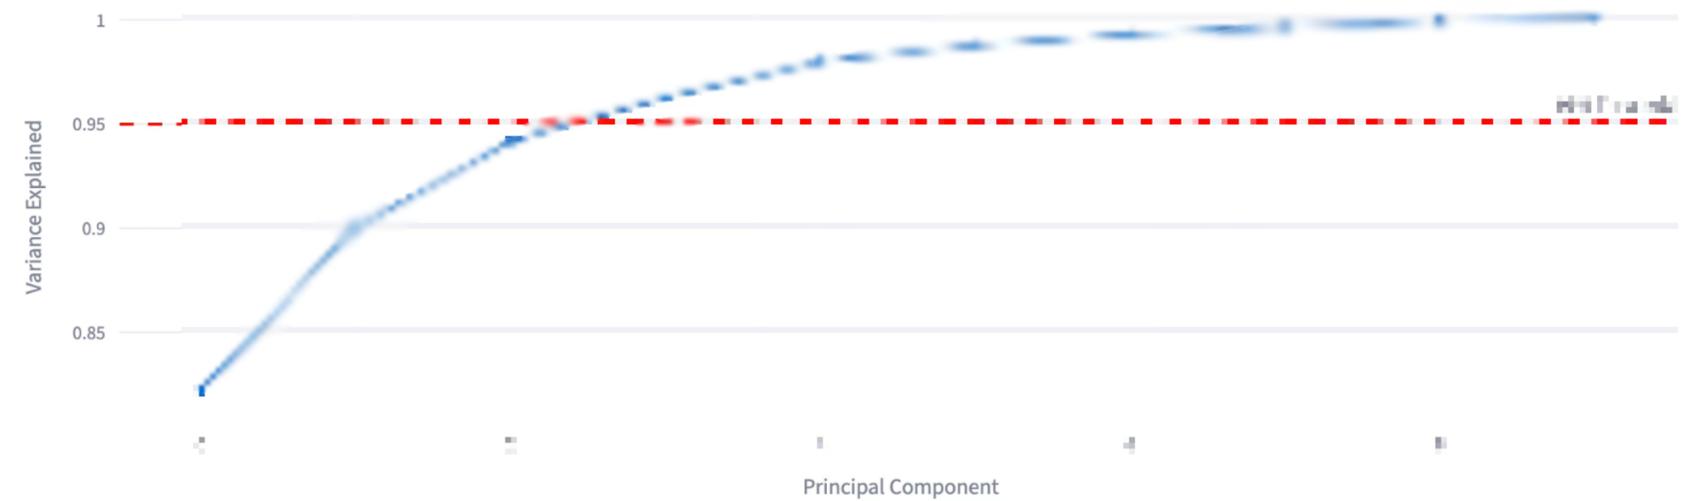

Effective Drivers (95% Var)

⚠ You have redundant funds that add complexity/cost but no unique risk diversification.

Cumulative Variance Explained

FIRE & Retirement Simulations

1. The simulations presented in this report utilize advanced mathematical modeling to transition from static estimates to dynamic, reality-based scenarios. The Regime States analysis visualizes the "Sequence of Returns" risk by mapping potential paths of Bull and Bear market cycles over a X-year horizon, ensuring a strategy isn't just based on average returns but can withstand early-retirement market volatility.

2. This is further quantified through the Monte Carlo Corpus Projection, which displays a range of probabilistic outcomes; the median blue line represents the expected trajectory, while the red dashed "stress" line (10th percentile) reveals how the portfolio might behave in bottom-tier market conditions.

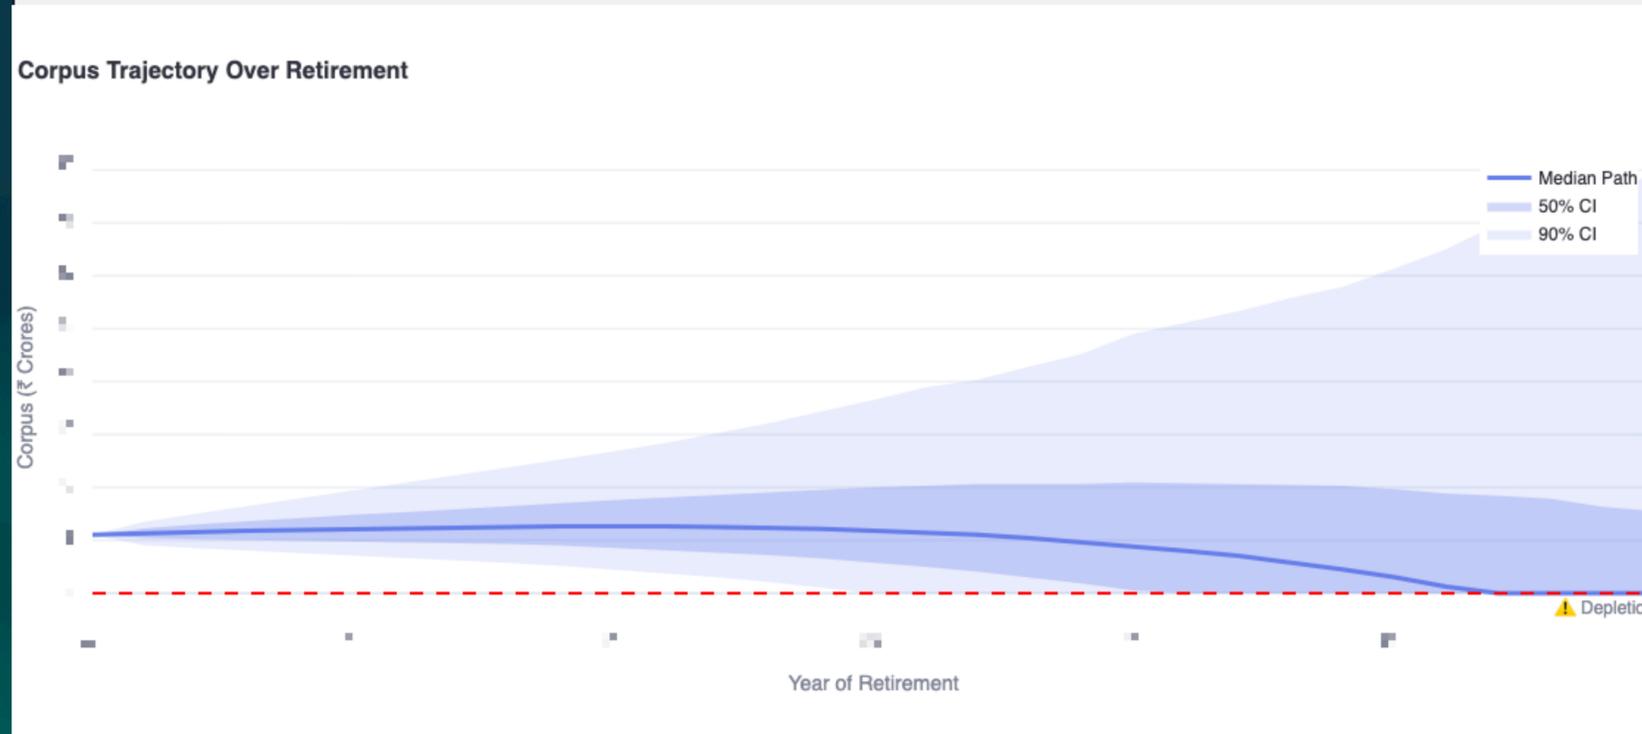

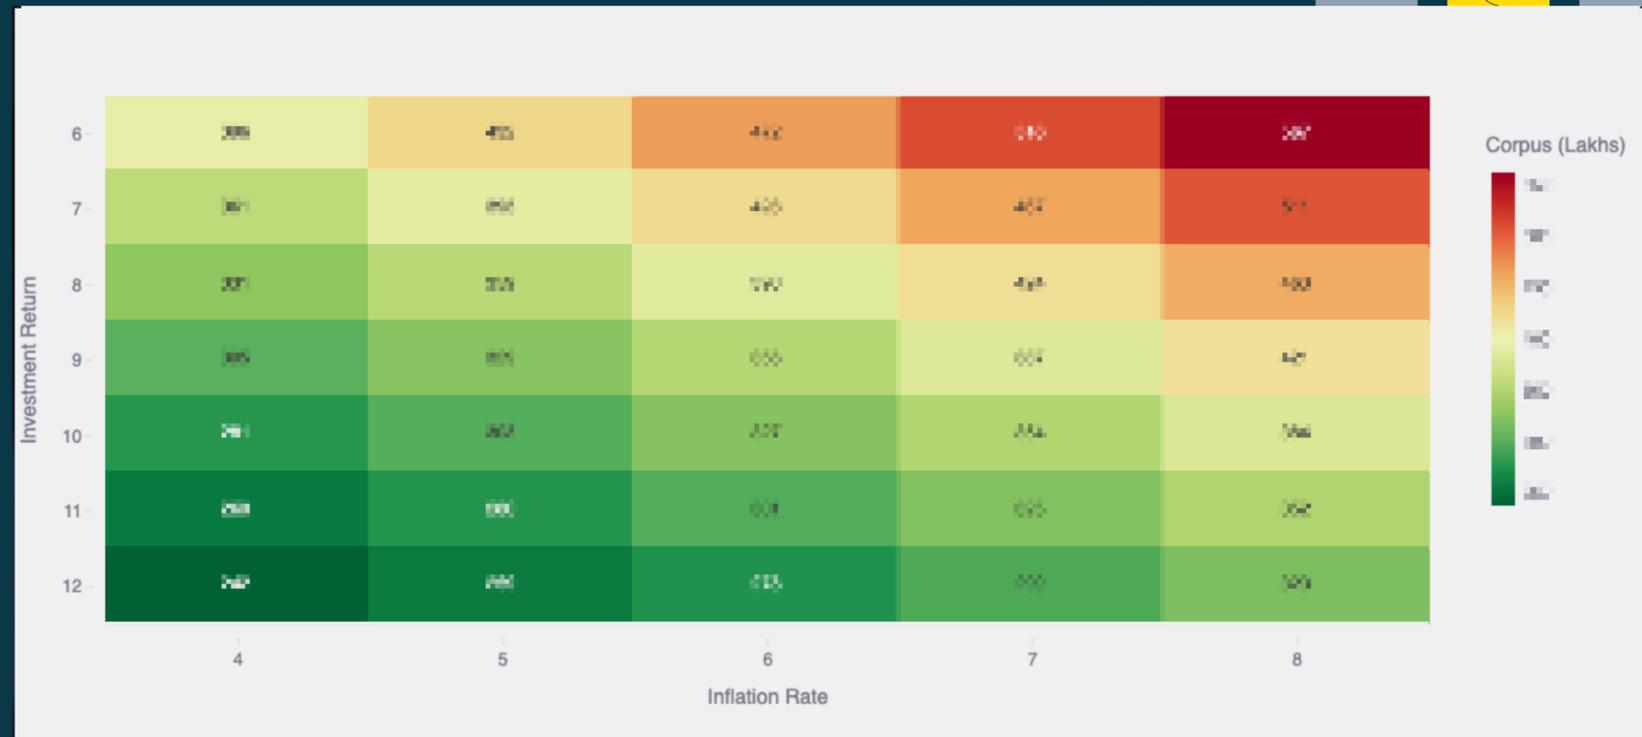

3. Finally, the Terminal Corpus Sensitivity Analysis acts as a strategic "What-If" matrix, intersecting varying inflation rates with investment returns to pinpoint exactly where the plan remains resilient (Green) or becomes vulnerable (Red). Collectively, these tools allow for a rigorous stress-testing of your financial goals against diverse market regimes and economic variables, though please note that actual client reports include bespoke commentary and specific data points not present in this illustrative specimen.

FIRE & Retirement Simulations

1. The Terminal Corpus Sensitivity Analysis acts as a strategic "What-If" matrix, intersecting varying inflation rates with investment returns to pinpoint exactly where the plan remains resilient (Green) or becomes vulnerable (Red). Collectively, these tools allow for a rigorous stress-testing of your financial goals against diverse market regimes and economic variables, though please note that actual client reports include bespoke commentary and specific data points not present in this illustrative specimen.
2. A graph representing the monte carlo of the terminal corpus simulation.
